Crew Layover Lodging Management

Transportation Management.

Irregular Flight Crew Placement.

PROBLEM STATEMENT

To provide 24*7 technical support for the client.

CIS SOLUTION

Focused mind helped us to overcome any hurdles (i.e.) scenario during our operation. Proper time management and team work made the operations easier. We used to take any scenario and discuss among the team for the proper solution for it and used to cross check it with our customer service team. Proper PowerPoint Presentation, roster and time scheduling of reports made the ongoing operations flexible.

CHALLENGES DURING IMPLEMENTATION

Every process has an objective behind it and a complete workflow to follow. The important part in all the processes are terminologies and their meanings related to process. The process we worked on was a completely conceptual process. It is scenario based and needs proper determination, time and logical analyzing. At start we underwent an extensive training over terminologies, various operations and found it a bit challenging but interesting to work on Data Base Management System.

It was hard for anyone to train us on all the scenarios that may occur, but most were told and explained. Later on once team was live operations were managed successfully.

POSITIVE OUTCOME

Process enabled a team bonding environment as it's necessarily required to get going with tricky operations. Providing support for Aviation and Hospitality Industry (Industry that runs 24*7*365) has been a great achievement for us.
